*Motorcycle Accessories for Safer Riding*

## **Brake Light Flasher**

The brake light flasher connects to the center brake light on the K1200LT trunk rack. It makes the brake light flash rapidly for about two seconds, and then stay on solid for as long as the brake is applied. The cycle repeats every time the brake is applied. Easy installation. Mounts in the trunk's storage compartment under the mirror.

## **LED Tail and Brake Light Kit**

The LED Tail and Brake light kit contains everything you need to add a high-visibility combination tail and brake light to the license plate holder of your K1200LT (the license plate is moved down to make room for the LED taillight).

## **Tip-Over Wing LED Strip Kit**

This kit adds 15 amber LEDs to each Tip-Over wing. The LEDs come pre-installed on a thin 30 cm long black strip. The LEDs act as both running lights and turn signals, making it easier for other vehicles to see the side of your bike and your intention to turn or change lanes.

## **Trunk Mounted LED Taillight and Turn Signals**

This kit adds three LED strips to your trunk, just below the lid. The upper strip goes all the way around the three visible sides and acts like a red running light. The two lower strips (they meet at the center of the trunk) act as left and right amber turn signals. Really lights up the back and rear sides of the bike.

## **Tip-Over Wing Marker Light**

This kit adds an amber side marker light to the rectangular indentation on the chrome covers of the tip-over wings (near the rider's feet). The marker light acts as both a running light and turn signal, making it easier for other vehicles to see the side of your bike and your intention to turn or change lanes. Very easy to install.
